

Problem: [Cooling temperature is too high]

Action: Check the below mentioned cooling related points.

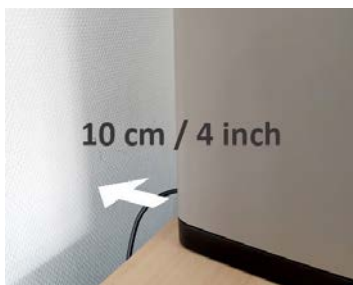

Check if the door of the cooling compartment is fully closed.

Check if the cooling filter is not dirty/clogged.
The filter is located in the detachable cover at the machine rear side. Open the cover to reach it.

Take the filter out and clean it
(under a running tap, and wipe dry)

Check if there is sufficient ventilation space behind the machine (approx. 10 cm / 4 inch)

Press the [standby] button for 5 seconds to reset the machine.
The button is located at the left side of the door. (Open the door to reach)
